Hello new ACMer, This is ACM BOSS.

I've been told that you had attended one session the last thursday. I know that you now know how to write a simple Java code.

I am in a big trouble and I need your help. Me and my cat "Meme" on our way for a long trip. I parked at one side of the road to have a little break. I didn't realize that I felt asleep for a moment, when I wake up I couldn't see "Meme" around. Now I want to call it exactly ten times to come back to me.

I know that you can write a Java code printing "Meme" ten times. Could you help me finding it?

output:

Meme

Meme

Meme

Meme

Meme

Meme

Meme

Meme

Meme

Meme
